

Between the second and third submissions, we've made couple of main changes in the design:

1. Created the Data Access Layer and added classes to it: DBConnector, ColumnDTO, BoardDTO, BoardControllerDTO, TaskDTO (Haven't implemented it yet), UserDTO, UsersBoardsDTO.
2. Updated the relevant functions on the Service Layer (According to the changes made) and created couple of new functions to the BoardService and ServiceController
3. Created more tests for the new functions and updated the current ones according to the changes made in the classes.
